## Informed consent – COVID-19 mRNA vaccines

Following vaccination against COVID-19, reactions to COVID-19 mRNA vaccines often occur which usually disappear on their own within a few days. Pain or swelling may occur very often at the injection site; reddening, rashes or urticaria may occur often. Moreover, (extreme) tiredness, headache, muscle and joint aches and/or joint stiffness, swelling in the armpits, nausea, vomiting, diarrhoea, shivering and fever may occur very often; rashes may occur often. Very often means that more than 1 in 10 vaccinated persons are affected; often means that up to 1 in 10 vaccinated persons is affected. Severe allergic reactions may occur. For details, please refer to the package leaflet provided electronically.

You may also request a hard copy of the package leaflet. Should you have any further questions, please get in touch with your doctor.
